

Journal of the Association of Water Board Directors – Texas

AWBD Project Awards Program 2016

DIVISION III - 1001 – 1500 connections

Project Description: The District utilizes a multi-faceted approach and varied strategies that result in significant savings of water and reduced consumption. It has seen dramatic reductions in residential water usage (down from 10,300 gallons per month in 2012 to 8,180 in 2015.) It uses the W.I.S.E.Guys (Water Irrigation Evaluation System) to reduce irrigation consumption for the various HOAs in the District.

Additionally, the District employs a progressive rate schedule for water conservation; education through newsletters, bill inserts and programs in the 4th and 5th grades; has a rebate program for water conserving devices; promotes conservation on the District website; and, aggressively works with residents to ensure awareness and water conservation, including distributing leak detection tablets and faucet aerators to residents.
